

# GOSAT-2 path calendar

NIES GOSAT-2 Project  
November 24, 2022 Rev. A

The orbit of GOSAT-2 is a sun-synchronous sub-recurrent orbit. The recurrent period is 6 days, and the number of revolutions per a recurrent period is 89. A path number is given to each revolution starting from one ascending node to the next ascending node passing through the Arctic pole and the Antarctic pole as shown in Fig.1. The path number increases each time as moving westward to the next adjacent orbit. The path number of the descending path which passes through Lamont, Oklahoma in the USA (36.6N, 97.5W), one of the validation sites of TCCON (Total Carbon Column Observing Network) is 68.

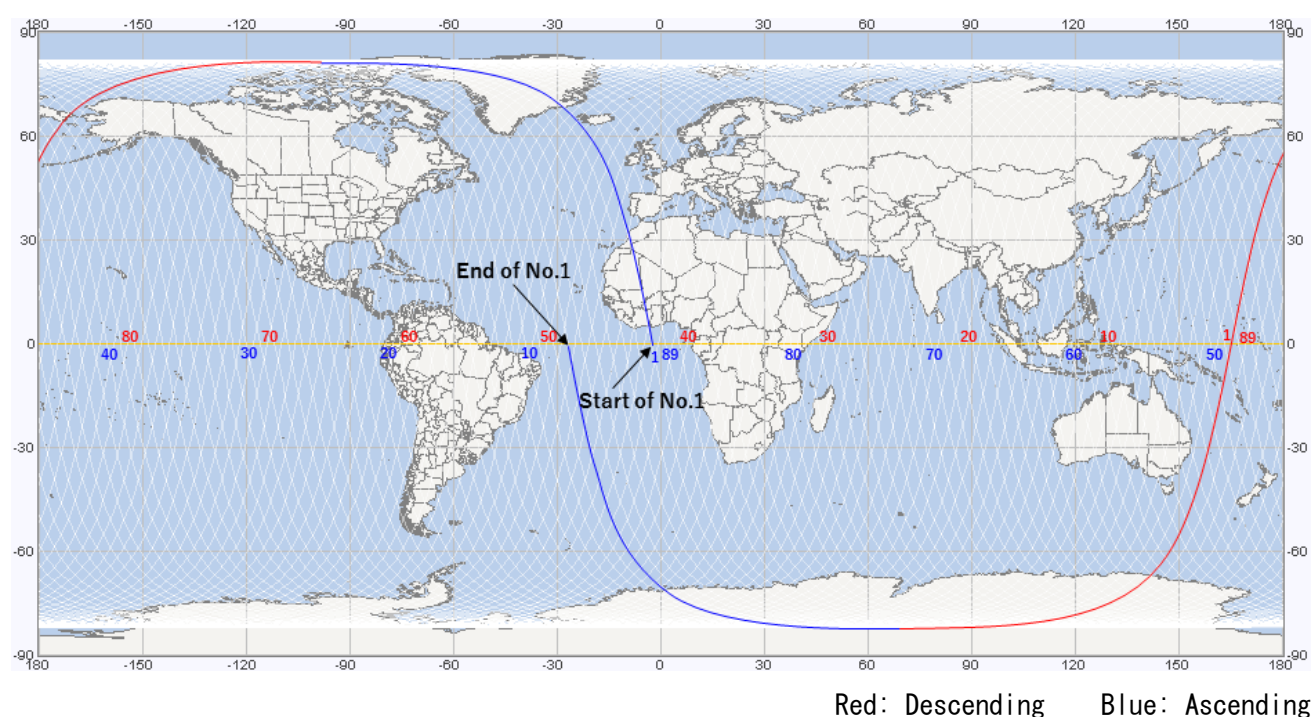

Fig.1 GOSAT-2 path numbers

As the recurrent period of GOSAT-2 is 6 days, the paths are grouped into 6 groups (A, B, C, D, E and F). The path group for the day is color-coded and shown in the path calendar on the next page. The date in the path calendar is defined at the longitude of the ascending node.
